

■ Key battery depletion

- ▶ Vehicles without a smart key system
 - The standard battery life is 1 to 2 years.
 - Even if the key is not used, the battery may become depleted and the following symptoms may occur. Replace the battery with a new one when necessary. (→P. 494)
 - The wireless remote control function does not operate.
 - The area in which the wireless remote control function can be operated becomes smaller.
- ▶ Vehicles with a smart key system
 - The standard battery life is 1 to 2 years.
 - If the battery becomes low, an alarm will sound in the cabin when the engine stops.
 - As the electronic key always receives radio waves, the battery will become depleted even if the electronic key is not used. The following symptoms indicate that the electronic key battery may be depleted. Replace the battery when necessary. (→P. 494)
 - The smart key system or the wireless remote control does not operate.
 - The detection area becomes smaller.
 - The LED indicator on the key surface does not turn on.
 - To reduce key battery depletion when the electronic key is to not be used for long periods of time, set the electronic key to the battery-saving mode. (→P. 163)
 - To avoid serious deterioration, do not leave the electronic key within 3 ft. (1 m) of the following electrical appliances that produce a magnetic field:
 - TVs
 - Personal computers
 - Cellular phones, cordless phones and battery chargers
 - Recharging cellular phones or cordless phones
 - Table lamps
 - Induction cookers

■ Replacing the battery

→P. 494

■ Confirmation of the registered key number

The number of keys already registered to the vehicle can be confirmed. Ask your Toyota dealer for details.

■ If a wrong key is used

The key cylinder rotates freely to isolate inside mechanism.
