

Wireless charger (if equipped)

A portable device, such as a smartphone or mobile battery, can be charged by just placing it on the charging area, provided the device is compatible with the Qi wireless charging standard created by the Wireless Power Consortium.

The wireless charger cannot be used with a portable device that is larger than the charging area. Additionally, depending on the portable device, the wireless charger may not operate properly. Refer to the operation manual of the portable device.

The “Qi” logo is a trademark of the Wireless Power Consortium.

■ Name for all parts

- ① Power supply switch
- ② Operation indicator light
- ③ Charging tray
- ④ Charging area*

*: Compatible portable devices and the wireless charger contain charging coils. The charging coil inside the wireless charger can move within the area around the center of the charging tray. When the charging coil inside a portable device is detected within the charging area, the charging coil in the wireless charger will move near the other coil and charging will begin. If the charging coil inside the portable device is moved out of the charging area, charging will be stopped automatically.

Additionally, if 2 or more portable devices are placed on the charging tray at the same time, each charging coil may not be detected correctly and charging may not be possible.
