■ After recharging/reconnecting the battery (vehicles with a smart key system)

- Unlocking the doors using the smart key system may not be possible immediately after reconnecting the battery. If this happens, use the wireless remote control or the mechanical key to lock/unlock the doors.
- Start the engine with the "ENGINE START STOP" switch in ACCES-SORY mode. The engine may not start with the "ENGINE START STOP" switch turned off. However, the engine will operate normally from the second attempt.
- ■The "ENGINE START STOP" switch mode is recorded by the vehicle. If the battery is reconnected, the vehicle will return the "ENGINE START STOP" switch mode to the status it was in before the battery was disconnected. Make sure to turn off the engine before disconnect the battery. Take extra care when connecting the battery if the "ENGINE START STOP" switch mode prior to discharge is unknown.

If the engine will not start even after multiple attempts, contact your Toyota dealer

A CAUTION

Chemicals in the battery

Batteries contains poisonous and corrosive sulfuric acid and may produce hydrogen gas which is flammable and explosive. To reduce the risk of death or serious injury, take the following precautions while working on or near the battery:

- Do not cause sparks by touching the battery terminals with tools.
- Do not smoke or light a match near the battery.
- Avoid contact with eyes, skin and clothes.
- Never inhale or swallow electrolyte.
- Wear protective safety glasses when working near the battery.
- Keep children away from the battery.
